

**Transport
sharing
platform**

Different vehicles for different experiences

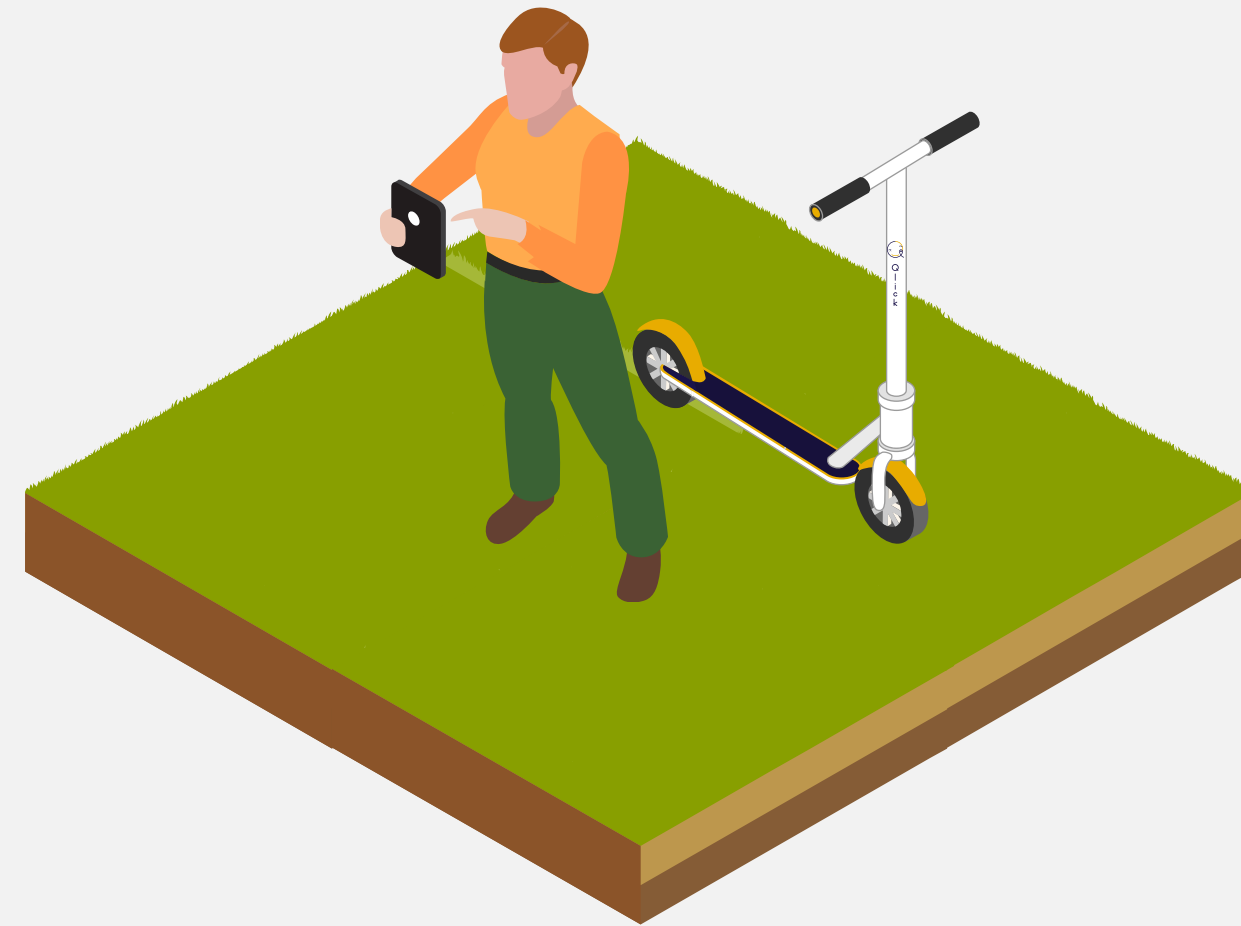

The scooter market in Russia is just emerging, but it is already receiving significant investments: in 2019 «Delisamokat» spent € 19 million on the development of a sharing service and launch in seven cities.

Experts believe that the trend for micromobility will continue: scooters will become an integral part of cities.

Moscow mayor Sergei Sobyanin presented gratitude to the Co-founder of the company Vincenzo Trani

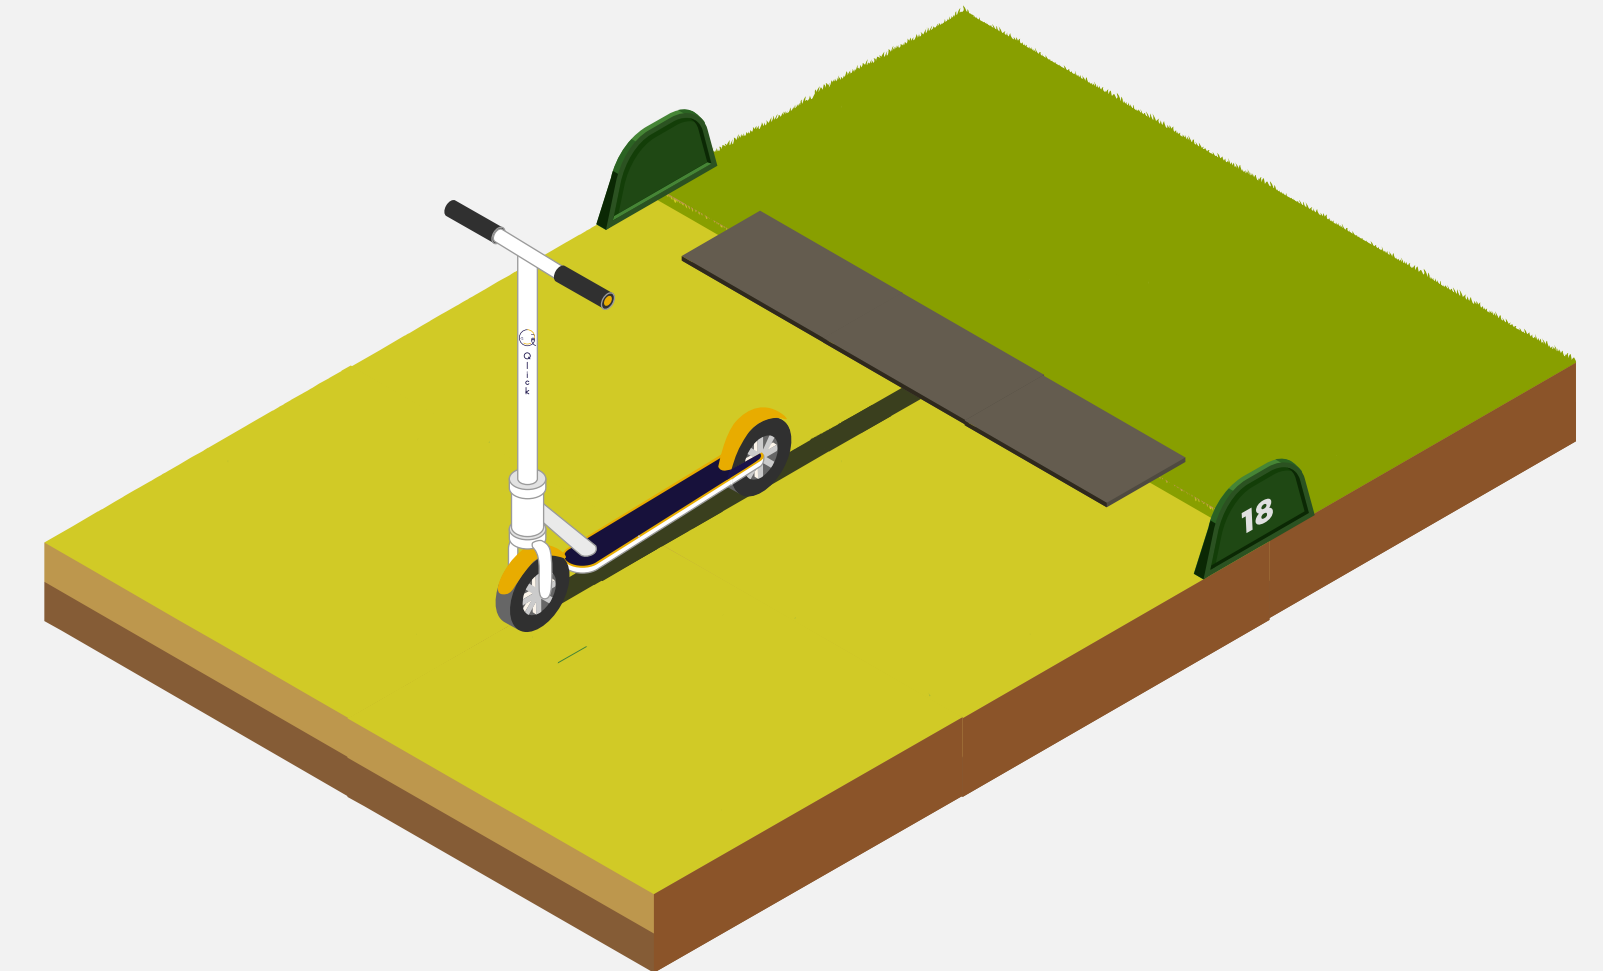

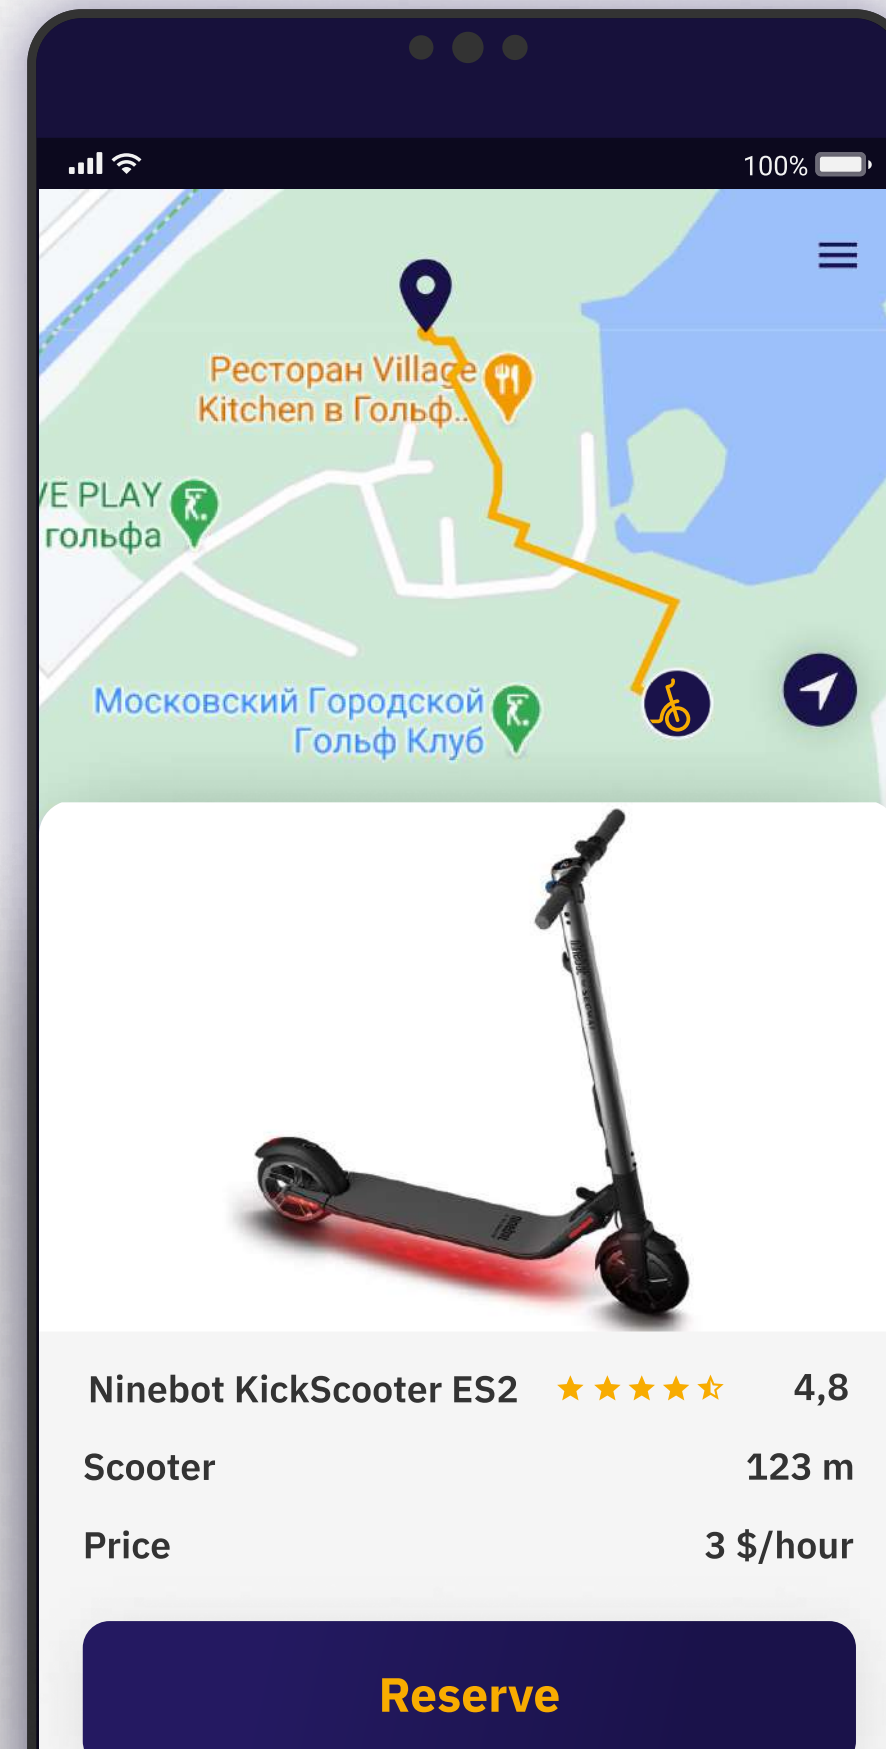

Sharing process

1. Choose the transport that you need, and we will find the nearest available and guide you to it.

for this, there are green and yellow zones on the map of each city.

2. The cost of the reservation is calculated taking into account all conditions (user status and discounts).

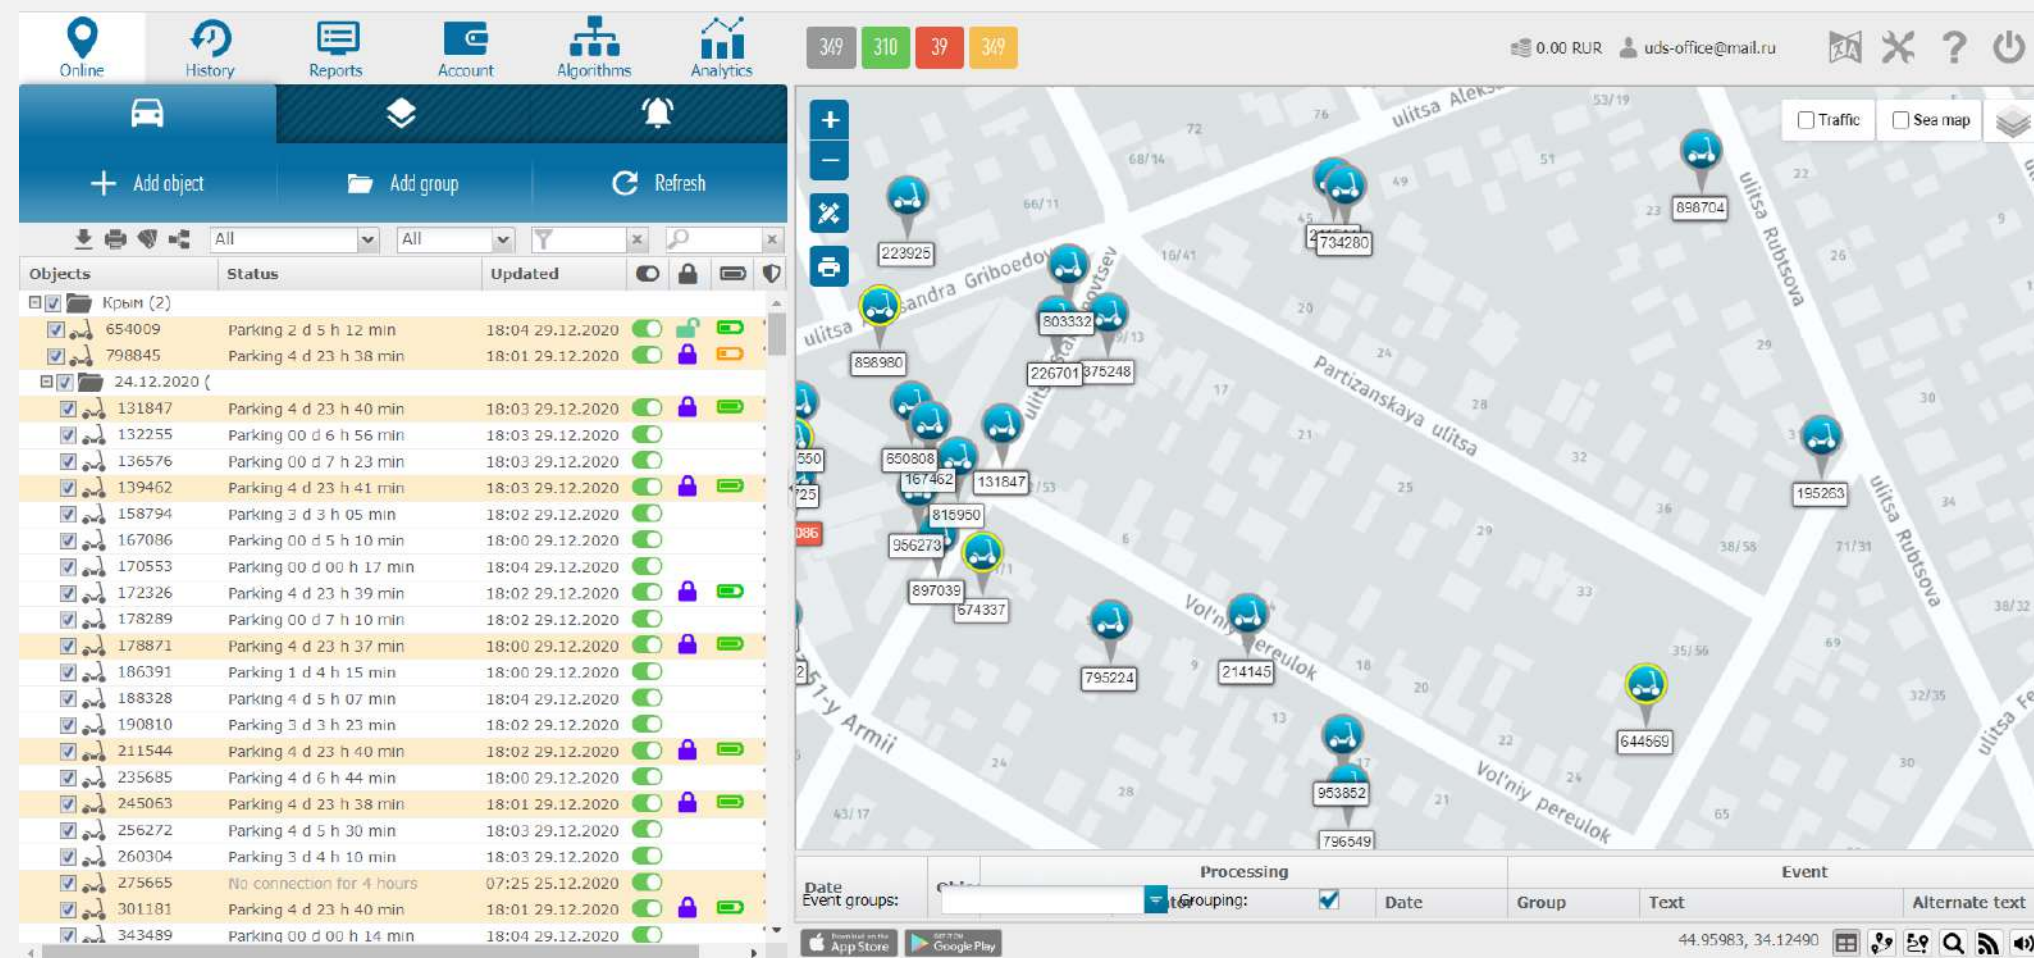

3. The system automatically controls how the vehicle is used.

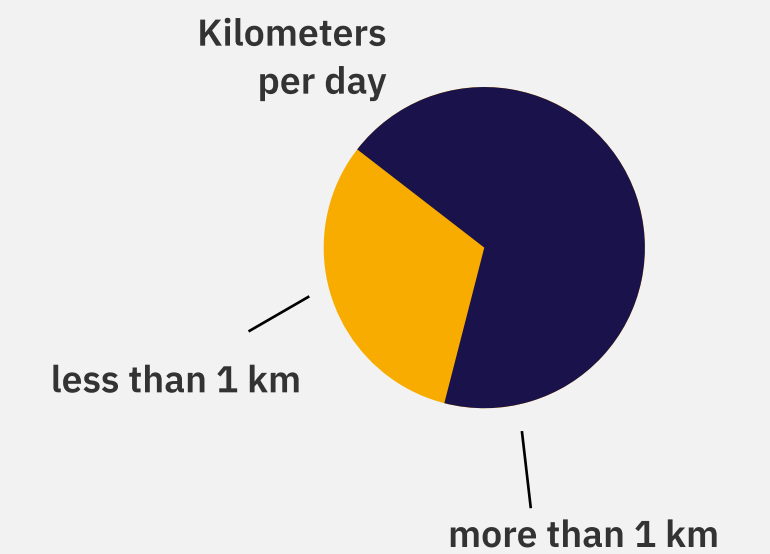

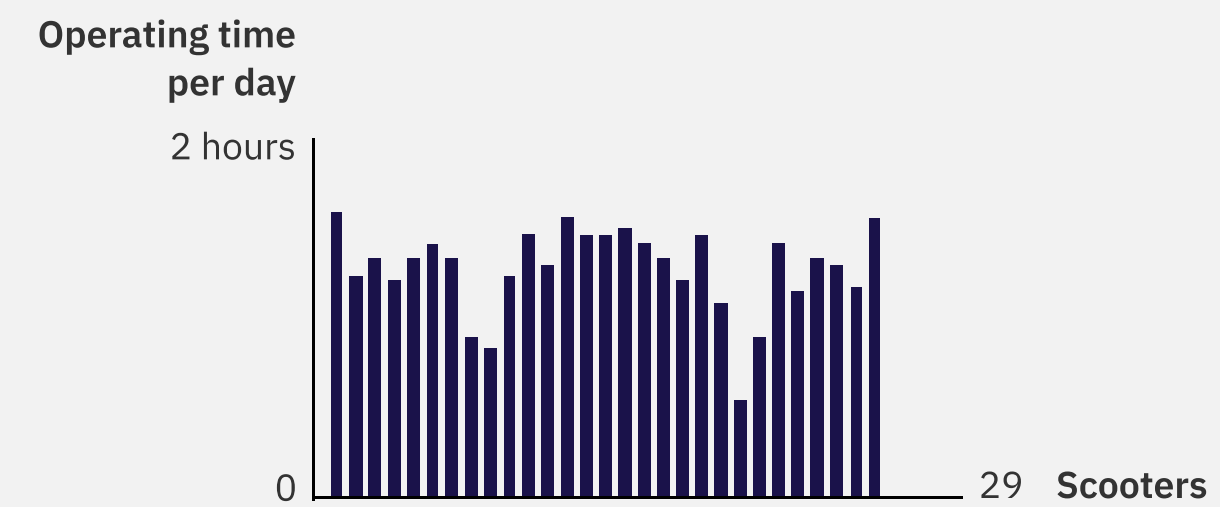

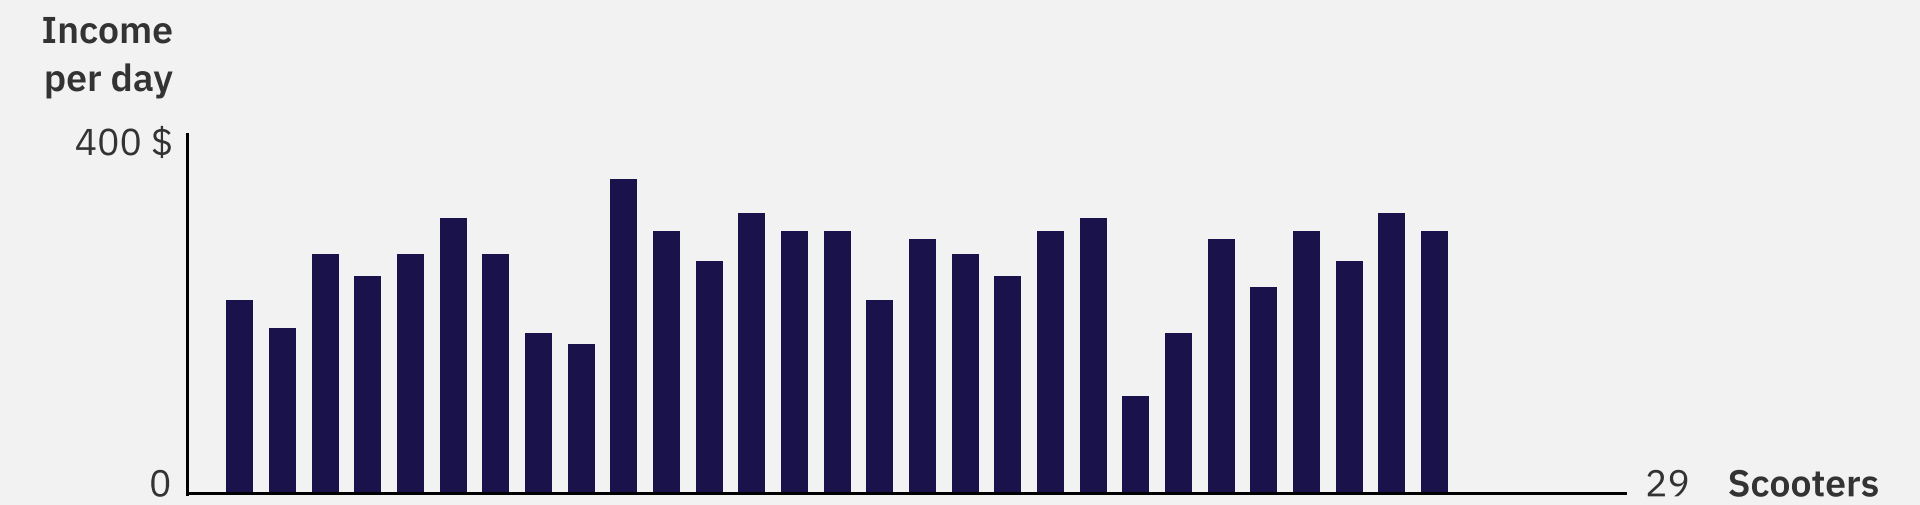

The technique is not tied to stations. It can be used and left where it is needed and convenient. The main thing is to be polite and not interfere with other road users; for this, there are green and yellow zones on the map of each city.

Portal for administration and statistics collection

Up-to-date information on the state of equipment and remote control of equipment

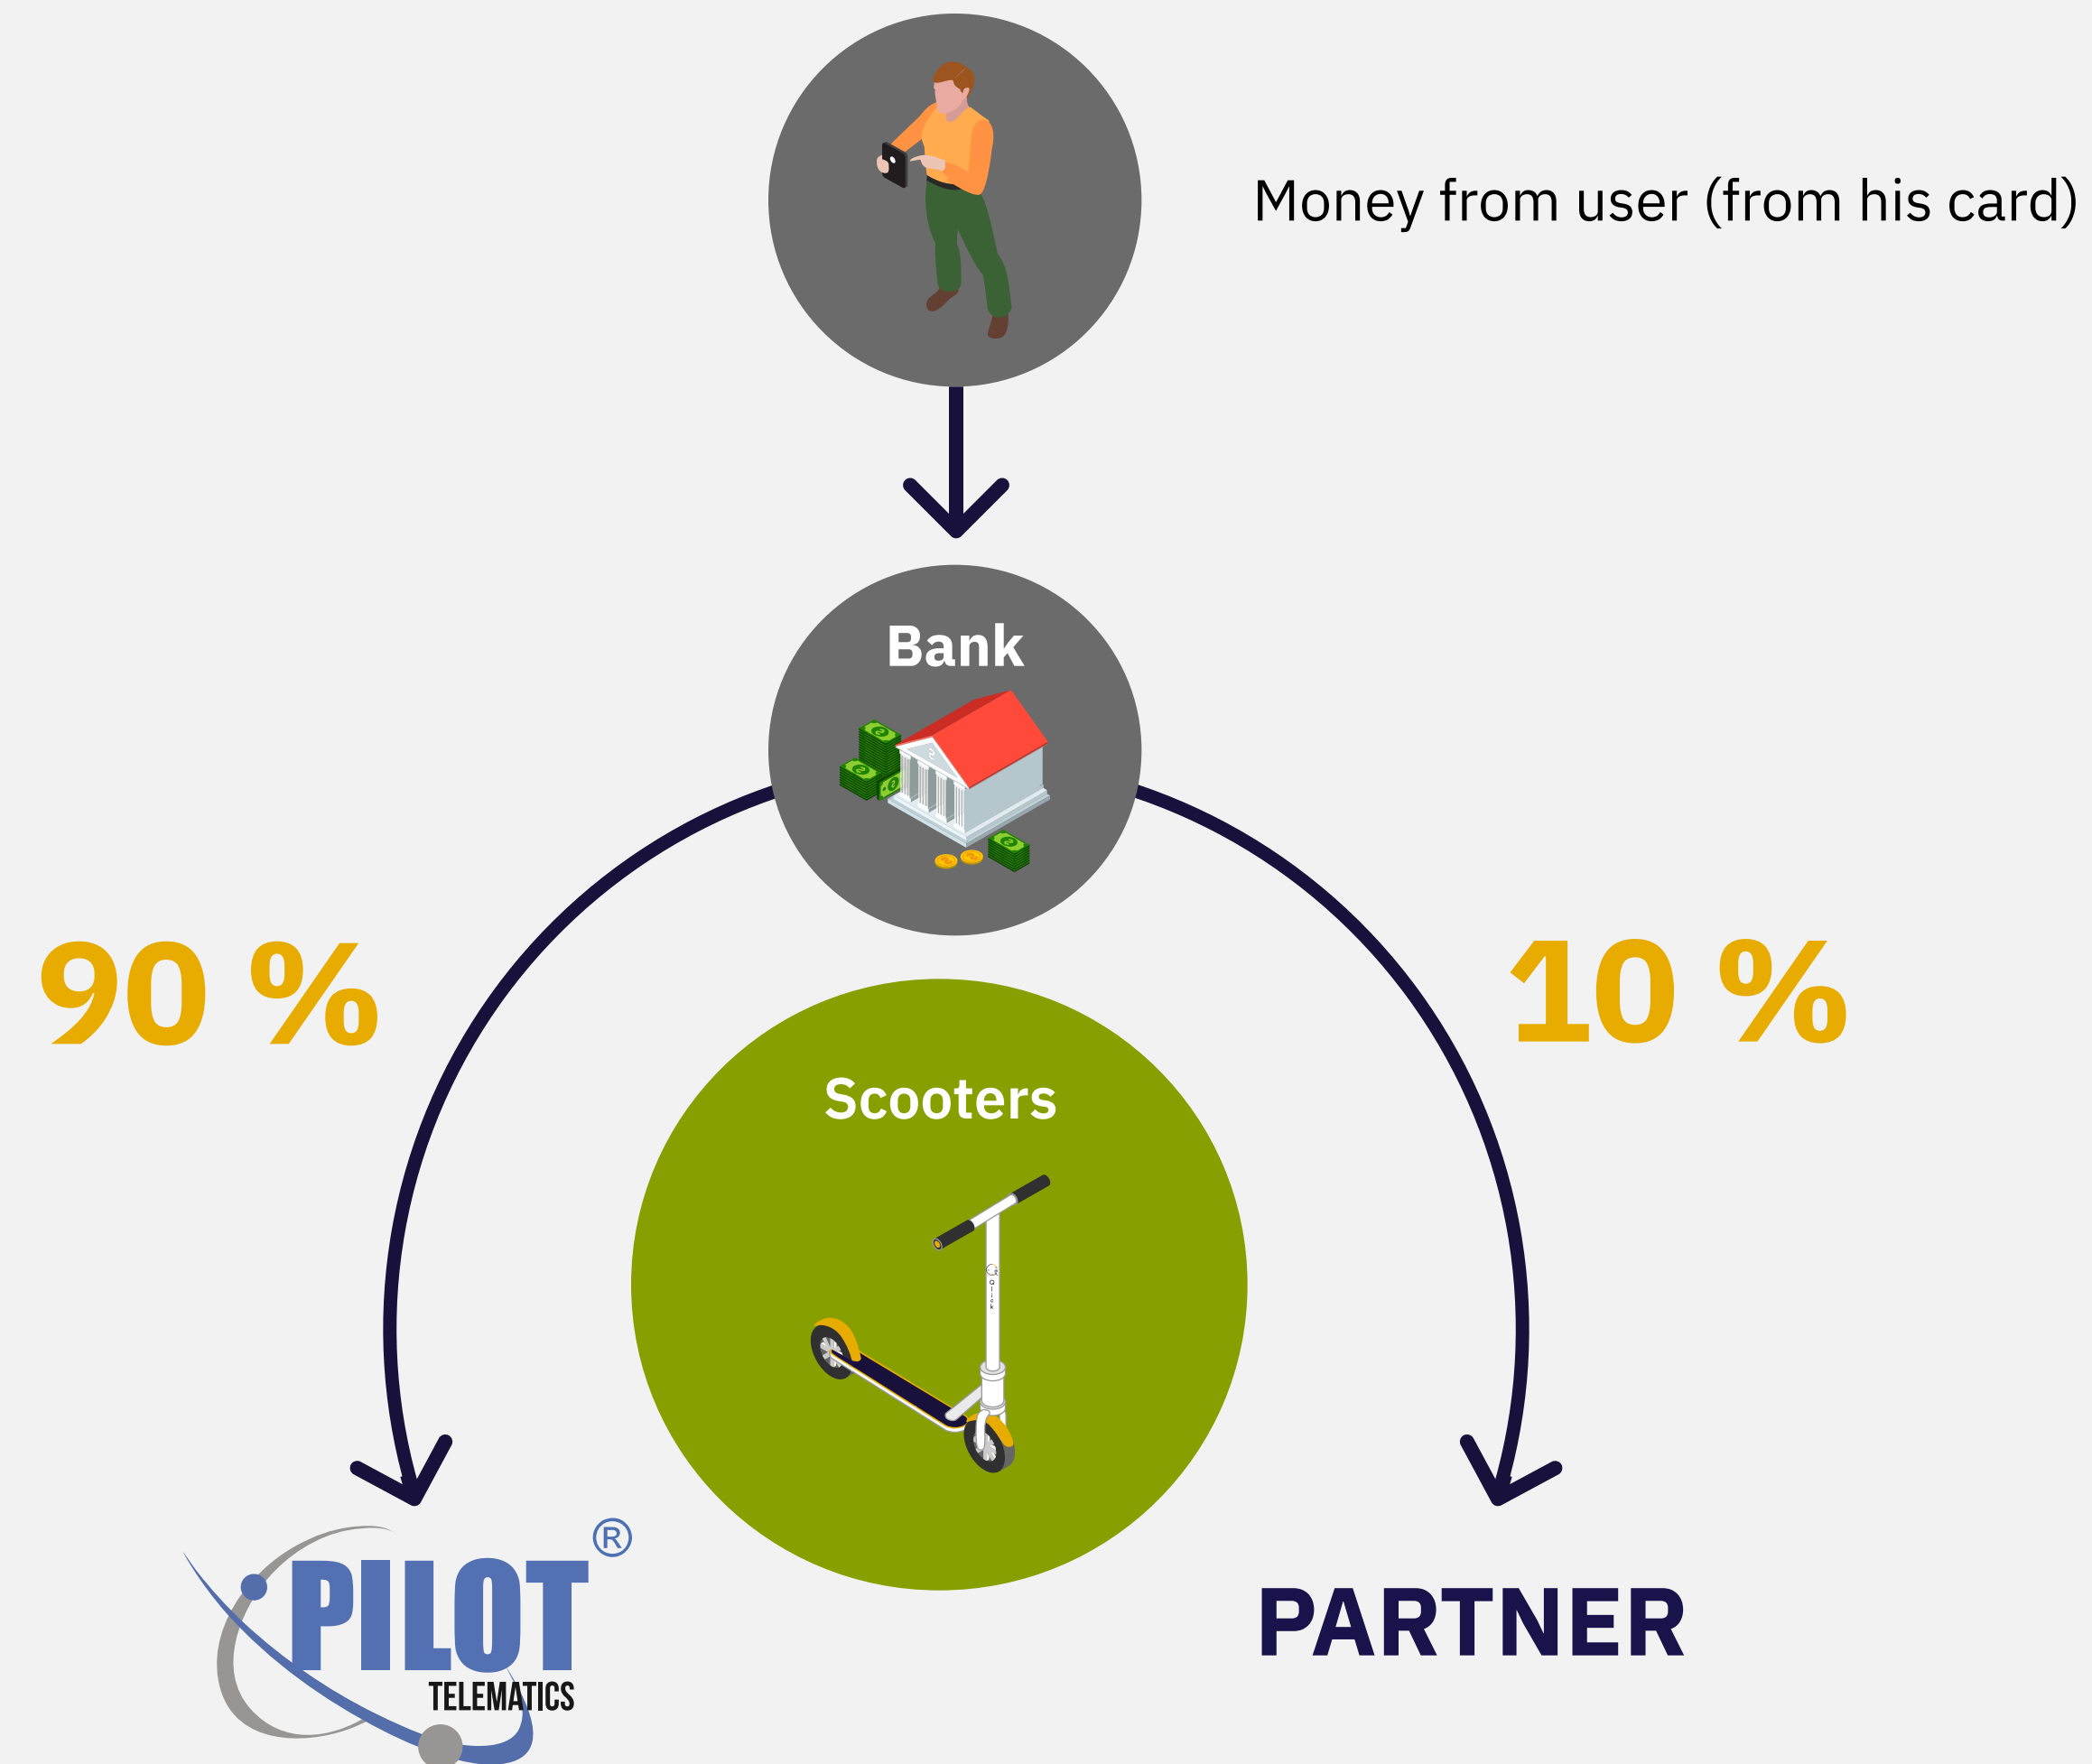

Statistics based on collected data

Business cooperation

We offer revenue sharing:

Tariffs for scooters

Activation (include 5 minutes for ride) - **R24**
1 minute ride - **R2**
